REFLECTIONS

What worked well?

Everything works well. I commend Replit's ability to also create illustrations and know where to appropriately add them, including images. I love that this one page website is very well-arranged and intuitive. It is direct to the point.

What needed manual fixing?

The only manual fixing I had to do was to add more visually appealing elements to the website to keep my audience engaged more longer in the website and also to visually communicate to my audience about how the advocacy typically engages.

What did you learn about prompting?

The thing I personally learned about programming is that one needs to be specific and not use slangs too much or jargons that are not specific. Additionally, I had to think about how I wanted it to look like first, then view the revisions to see if the output Replit gave is accurate to how I envisioned the website. For the technicalities of prompting, I learned to be more specific of how you want it to be. The more detailed the prompting is the closer it is to the vision in one's head.
